# INDUSTRY 4.0 SMART FACTORIES

System integration

To propel our enterprise into new era of efficiency and innovation, we are strategically incorporating capablities of IOT & AI in eTact ERP.

#### > IOT SENSORS AND DEVICES

Deploying IoT sensors on production machinery to monitor real-time performance, collecting data on equipment health, energy consumption, and production output.

#### PREDICTIVE MAINTENANCE

Utilizing Al algorithms to analyze data from IoT sensors, predicting when equipment is likely to require maintenance. This ensures timely repairs, reducing unplanned downtime and extending the lifespan of machinery.

#### > CONNECTED SUPPLY CHAIN

Integrating IoT devices across the supply chain, tracking the movement of raw materials, components, and finished products. This provides real-time visibility into inventory levels and facilitates efficient logistics.

#### DATA-DRIVEN DECISION-MAKING

Integrating a robust ERP system with Al capabilities to process and analyze data from various sources. This empowers management with actionable insights, facilitating strategic decision-making based on real-time information

#### ENERGY MANAGEMENT

Using smart meters and sensors to monitor energy consumption throughout the facility. Al algorithms analyze the data to identify opportunities for energy efficiency, contributing to cost savings and sustainability.

#### **QUALITY CONTROL**

Integrating IoT sensors and computer vision technology to monitor and ensure product quality. Automated quality control systems can identify defects or deviations from standards, reducing waste and enhancing overall product quality.
